DAO tools directory

Tally allows users to more easily interact throughout the DAO governance process by providing them with a voting dashboard, a set of governance tools, real time research and analysis and governance wiki. The user within his account can set-up notifications for on-chain events, profile public pages and verified on-chain identity linked to a Twitter account.

Website

Twitter

Type: governance

DeepDAO is a data analytics website for the DAO ecosystem. Through an interactive dashboard, it provides data insights about DAO performance, funding, legal status, and community involvement. DeepDAO is a "one-to-go" place for accurate data-centric metrics that help businesses and individuals research, invest, consume, and participate in the specific DAO. The tool is also useful for DAOs to track performance and compare systems.

Website

Twitter

Type: analytics, identity

BrightID is a DAO governed social identity network that provides people "Proof-of-uniqueness" through peer evaluation by trusted members. The tool allows applications to ensure that users use only one account in order to prevent Sybil attacks. Social recovery features secure digital identity and personal control over their own identification.

[Website](#)

[Twitter](#)

Type: identity

Ethereum Name Service is a distributed, open, and extensible naming protocol based on the Ethereum blockchain. Protocol maps human-readable names to machine-readable identifiers such as blockchain public addresses, content hashes, and metadata (e.g. name.eth). Domain owner has full control over acquired digital assets in NFT form.

[Website](#)

[Twitter](#)

Type: identity, infrastructure

POAP (short for "Proof-of-Attendance protocol") is a platform that enables the creation and storage of digital NFT badges which are used as digital records and proof that the collector participated in a particular event or perform a particular task. POAPs are usually issued by protocols, projects, and event organizations to active community members as early verifiable proof for participation.

[Website](#)

[Twitter](#)

Type: identity, NFTs

Boardroom is a protocol-agnostic governance and management platform built to improve distributed decision-making across crypto networks**.** Its governance interface enables DAOs to standardize

governance mechanisms (voting, delegating) and enable DAO members to easily participate in governance.

[Website](#)

[Twitter](#)

Type: governance, analytics

Aragon is a decentralized platform that lets anyone create and manage DAO in a modular way, with a suit of pre-made templates and smart contracts. It offers a highly customizable framework with tools for deployment, token-economics, governance, reward contribution, finance management, dispute resolution, and funding.

[Website](#)

[Twitter](#)

Type: DAO builder

Colony is a platform for creating and operating DAOs with over 20 tools. It provides everything an organization needs to operate: payments, team coordination, authority, governance, fundraising, revenue sharing, arbitration, contribution, token-economics, and the ability for interaction between DAOs.

[Website](#)

[Twitter](#)

Type: DAO builder, governance

Gardens is a DAO framework based on Aragon OS built by the 1hive community with a focus on community coordination and collaboration. Gardens framework offers customizable governance solutions with

templates for token creation, voting systems, social contracts and dispute resolution.

Website

Twitter

Type: workspace, governance

Unlock Protocol is an open-source protocol that allows creators to easily monetize their work with memberships, without relying on middlemen. Creators can integrate and build any kind of membership application. (on the customizable way) + NFT

Website

Twitter

Type: monetization, NFTs

DAOstack is an open-source operating system for DAOs with built-in solutions to support the entire process of building and managing DAOs. DAOstack toolkit is composed of a modular smart contract framework, Javascript methods library, user interface, and governance sandbox, also with the goal to provide the ultimate solution for collaboration between DAOs.

Website

Twitter

Type: DAO builder

Tribute DAO is a modular framework for easy and low-cost DAO development. Framework present evolved version of MolochDAO smart contracts with simpler code, adaptability, and upgradability, and design and architecture are based on Factory pattern.

[Website](#)

[Twitter](#)

Type: DAO builder

Compound Governor is an on-chain ****governance framework built by Compound labs, the company behind Compound Finance protocol. The framework consists of smart contracts for on-chain voting, treasury management, and upgrading protocols smart contracts.

[Website](#)

[Twitter](#)

Type: governance

DAOhaus is a no-code platform for launching and running DAOs, built on top of the Moloch DAO framework. The platform is owned and operated by the community of contributors. On the platform, users can launch their own DAO or join one of the existing DAOs.

[Website](#)

[Twitter](#)

Type: DAO builder

Collab.land is a user-friendly, tokenized, community management system managed by bots, where users can connect their identity with a targeted community. Users connect their wallets with discord or telegram bots and take assigned roles based on assets in the wallet in order to join in social space with a measurable contribution.

[Website](#)

[Twitter](#)

Type: governance, identity

Coordinape is a tool that tries to solve coordination productivity between DAO members. It allows DAO teams without top down management to autonomously allocate and reward contributors with funds via resistant social graphs.

[Website](#)

[Twitter](#)

Type: governance, identity

Proof-of-humanity is a social identity verification system for humans on Ethereum. PoH combines webs of trust, reverse Turing tests, and dispute resolution to create a sybil-proof list of humans. Protocol token UBI is given to all users successfully registered on PoH. The token is streamed to each account every second.

[Website](#)

[Twitter](#)

Type: identity

Rabbithole is a platform where users solve Web3 tasks on specific protocols in order to gain skills in the Web3 economy, build their on-chain reputation and resume. The protocol is also useful for projects and communities, which can recruit new members based on on-chain activities.

[Website](#)

[Twitter](#)

Type: Identity

SourceCred is a tool that makes individual contributions more visible and rewardable in community. SourceCred uses an algorithm to determine how much value a contribution or contributor added to a project overall. When a contribution is made to a project, SourceCreds purpose is to evaluate that contribution and assign it an amount of "Cred" based on how much value it brought to the project as a whole.

[Website](#)

[Twitter](#)

Type: governance, identity

Mirror is a Web3 publishing platform that allows users to create a publication on the blockchain. Publishers are able to launch a crowdfunding campaign, launch NFT, turn a post into an NFT, collect tips, split proceeds across contributors, and participate in the crypto economy.

[Website](#)

[Twitter](#)

Type: media, NFTs, crowdfunding

Sablier is a tool that allows users to stream tokens in real-time. Streaming payments is an alternative way of online payment for products, services, or internet workers, with pre-programmed payment dynamics that may depend on several factors such as; time interval, work done, warranty, contractual relationship, etc.

[Website](#)

[Twitter](#)

Type: payment infrastructure

Superfluid is a tool for on-chain, for programmable streaming cash flows with the possibility of integration on a high-level composable and modular way. It makes it easier to handle subscriptions, salaries, rewards, and any composable stream of value, with continuous settlement and per-second netting for extreme capital efficiency.

[Website](#)

[Twitter](#)

Type: payment infrastructure

Snapshot is a gasless voting tool that allows anyone to create off-chain space to manage their own proposal-making and voting strategies based on on-chain registered voting share.

[Website](#)

[Twitter](#)

Type: governance

Orca is a governance tool for coordination contributors in DAO. Present an extensible and modular DAO implementation, built around a small working group called pods. Each pod has a Gnosis Safe multi-sig wallet, which is controlled by the pod members through a proposal-approval mechanism.

[Website](#)

[Twitter](#)

Type: governance

DAOmasters is a DAO consultancy hub with a mission to onboard 1 million DAO contributors and operators. Project present Web3 version of popular no-code platform Makerpad, constantly evolving know-how source for using tools and the implementation of best-practice in managing DAO systems.

[Website](#)

[Twitter](#)

Type: knowledge base

Syndicate is a decentralized creation protocol for investment DAOs which in addition acts as a DAO social network. The protocol allows individuals and communities that in a permissionless way create investment DAO only from wallet address and provide a set of tools for managing a created organization. Syndicate is mostly focus on legal tools in order to bring legal protection to newly created DAOs

[Website](#)

[Twitter](#)

Type: DAO builder, legal

Ceramic Network Ceramic is a public, permissionless, open-source protocol that provides computation, state transformations, and consensus for all types of data structures stored on the decentralized web. Ceramic's stream processing enables developers to build dynamic information without trusted database servers to create powerful, secure, trustless, censorship-resistant applications.

[Website](#)

[Twitter](#)

Type: infrastructure

Gitcoin is a decentralized platform focused on Web3 development where web workers get paid to work on open-source protocols. The platform connects web workers, protocols, and funders with the goal to establish an accessible ecosystem with aligned incentives for all participants. The platform is organized as DAO and is the creator of a number of tools for managing public goods such as Kernel0x, Kudos, and Quadratic voting system and organizes a number of hackathons and funding grant rounds.

[Website](#)

[Twitter](#)

Type: public goods, workspace, identity

Dune Analytics is a platform for blockchain research, which provides users with a set of tools to query, extract, and visualize vast amounts of data from the blockchain. Dune is unlocking the power of public blockchain data by making it accessible to everyone.

[Website](#)

[Twitter](#)

Type: analytics

Biconomy is a protocol that provides a non-custodial and gas-efficient scalable relayer infrastructure that allows users to enjoy the simplicity of Web3 applications through a streamlined transaction procedure. Biconomy has offered products for gasless transactions, paying gas in ERC20 tokens and instant cross-chain transfers.

[Website](#)

[Twitter](#)

Type: payment infrastructure

Gnosis Safe is a smart contract wallet that gives you flexibility in securing your digital assets. GnosisSafe is mostly used by DAOs for treasury and management because it provides multi-signature and advanced recovery features.

[Website](#)

[Twitter](#)

Type:security

Llama is a hub that provides a suite of products and services for treasury management with a focus on DAOs and Web3 communities. Llama helps Web collectives to manage treasury, categorize income and expenses, build real-time interactive dashboards and create financial reports.

[Website](#)

[Twitter](#)

Type: treasury management

MEE6 is a discord bot-based service that helps DAO communities with a broad range of functionalities. Serve as a moderator in onboarding and welcoming new members, assigning roles, incentivizing member engagement, and other coordination activity on DAOs discord.

[Website](#)

[Twitter](#)

Type: governance

MintGate is a no-code platform that enables building a store for NFTs and token gated content. The platform allows users to create their own NFT marketplace website for unlockable digital content that is only accessible to NFT holders.

[Website](#)

[Twitter](#)

Type: NFTs, monetization

Guild is a community management tool for assigning and coordinating members' roles based on tokens, NFTs, POAPs, content, and other digital assets. Guild is possibly integrated into community workspace on discord and telegram, with many integrations still-in-development like; Pods(Orca), Unlock plugin, OnFlow, Stacks, ENS subdomains, etc.

[Website](#)

[Twitter](#)

Type: governance

Parcel is a Web3 PaymentOS with built-in tools for scaling and automation of Dao's financial operations. The parcel has built-in Gnosis Safe multi-sig, optimizes contributor compensation payments, automates payroll workflows for the core team, executes payment requests, and manages yield and asset management strategies.

[Website](#)

[Twitter](#)

Type: treasury management

Coinshift is a platform that simplifies and scales crypto treasury management for DAOs and crypto businesses. Coinshift is built on top of

Gnosis Safe smart contracts and provides users with a UI dashboard with many features like maintaining cash flows, running payroll, and checking transactional activities.

[Website](#)

[Twitter](#)

Type: treasury management

Discord is a chat platform with media-rich and multi-thread content. The platform was originally made for the gaming community to solve communication and organization problems of gaming teams, and today it is widely used by DAOs as a primary communication tool.

[Website](#)

[Twitter](#)

Type: governance, workspace

Discourse is a open source forum-based discussion platform with built -in flagging system for bad actors and incentivizing solutions for positive behaviors. With minimalistic user-interface, trust system tools and profile building option present ideal solution for DAOs governance discussions.

[Website](#)

[Twitter](#)

Type: governance, workspace

OpenLaw is a blockchain-based protocol for the creation and execution of legal agreements. Using OpenLaw, lawyers can more efficiently engage in transactional work and digitally sign and store legal

agreements in a highly secure manner, all while leveraging next generation blockchain-based smart contracts.

[Website](#)

[Twitter](#)

Type: legal

ImmuneFi is a bug bounty platform focused on Web3 and smart contract security. Platform provides bug bounty hosting, consultation, bug triaging, and program management services to blockchain and smart contract projects.

[Website](#)

[Twitter](#)

Type: security

Hats Finance is a proactive bounty protocol for white hat hackers and auditors, where projects, community members, and stakeholders incentivize protocol security and responsible disclosure

[Website](#)

[Twitter](#)

Type: security

Coinvise is an Ethereum open platform where creators can launch a social token and build a token-driven community. The platform enables creators to launch tokens or NFT, send bulk tokens to the community, create vesting schedules and create quests to reward contributors.

[Website](#)

Type: governance

Trello is a collaborative work management app designed to track projects, project workflow, highlight tasks underway, show who they are assigned to, and detail progress.

Type: governance, workspace

Notion is a project management and note-taking tool designed to help working groups coordinate deadlines, objectives, and assignments. With a lot of templates and built-in features, Notion presents efficient and productive workspaces for DAO contributors.

Type: governance, workspace

Nexus Mutual is a decentralized insurance protocol that helps users hedge against smart contract risk. Users are able to share the risk on the blockchain without going through an insurance company.

Type: insurance

Enzyme is a decentralized asset management infrastructure built on Ethereum. Using Enzyme Smart Vaults, individuals and communities can build, scale and monetize investment (or execution) strategies that employ the newest innovations in decentralized finance.

Website

Twitter

Type: treasury management

Utopia is a tool for collaborative payroll, reporting, and asset management for DAOs. Utopia has a built-in GnosisSafe multi-signature wallet and allows DAO managers to set recurring payments, receive payments requests from members and create transaction history for DAOs cashflow.

Website

Twitter

Type: governance, treasury management

LexDAO is a collective of legal professionals that connects the traditional legal settlement layer with the smart contracts digital environment. Collective tries to use advanced features of blockchain technology in order to build a better legal framework.

Website

Twitter

Type: legal

Tokensets is an EVM-based asset management platform that leverages existing decentralized finance protocols to provide financial infrastructure

for a wide range of use cases. The platform offers a fully customizable Defi framework for creating indices, treasury management strategy and other complex Defi products.

Website

Twitter

Type: treasury management

Kleros is an open-source online dispute resolution protocol which uses blockchain and crowdsourcing to fairly adjudicate disputes. Kleros works as a decentralized third party to arbitrate disputes in every kind of contract. Protocol in the arbitrage process incentivizes jurors with PNK tokens in order to act objectively.

Website

Twitter

Type: dispute resolution

XDAO is a tool for creating and managing DAOs supported on 12 blockchains. The tool has a built-in multi-signature wallet and optimization for Initial DEX Offering, Launchpad, crowd-funding, public, and private sale and investments.

Website

Twitter

Type: DAO builder

Rally is a platform that enables creators and their communities to build their own independent digital economies. Rally serves as a tool for content creators, musicians, gamers, streamers to engage with their fans

without third-party and together bring more value in form of fungible tokens or NFTs.

[Website](#)

[Twitter](#)

Type: governance, marketing

Yap DAO is the community that provides marketing, public relation and communication services for DAOs and Web3 projects. Yap DAO community consists of people with a wide range of non-technical expertise but with Web3/crypto knowledge who are willing to provide their services to the Web3 entity (DAO, protocol). Yap acts as a consultancy marketplace for projects where they can outsource different services.

[Website](#)

[Twitter](#)

Type: media, marketing

Metamask is a cryptocurrency browser and mobile wallet used to interact with EVM-based blockchain applications. Metamask allows users to manage and store private keys, broadcast transactions, send and receive tokens and securely interact with decentralized applications. Wallet also has a built-in DEX aggregator, so users can exchange their digital assets directly from the wallet interface.

[Website](#)

[Twitter](#)

Type: wallet, security

Github is a platform with a cloud-based service that helps developers store and manage their code, as well as track and control changes to their code. It makes it a lot easier for individuals and teams to use Git for version control and collaboration.

Website

Twitter

Type: governance, workspace

Alchemy is a Web3 blockchain development platform that provides a suite of developer tools, APIs, and node infrastructure to blockchain developers. Provided tools enable developers to focus on their applications and users, without interfacing with low-level blockchain integrations.

Website

Twitter

Type: infrastructure

Sputnik is a hub of DAOs communities in the NEAR ecosystem that offers a set of governance and coordination tools for DAOs and act as a mesh network for DAO-to-DAO interaction.

Website

Twitter

Type: DAO builder, governance

Palladin is a decentralized, non-custodial governance lending protocol where users can either loan the voting power in their governance token, or borrow some voting power. Depositors stake governance tokens or

derivatives that grant voting power in exchange for yield, while borrowers can leverage their voting power to gain more influence temporarily.

[Website](#)

[Twitter](#)

Type: governance

Metagovernance is an interdisciplinary research collective that builds standards and infrastructure for digital self-governance. Collective research every aspect of online governance mechanisms like governance failures, participation, compare governance systems and has built a public governance database - Govbase.

[Website](#)

[Twitter](#)

Type: Knowledge base, research, analytics

IPFS (short for InterPlanetary File System) is a protocol network for storage and access to decentralized, resilient, or private files. IPFS uses content-addressing to uniquely identify each file in a global namespace connecting all computing devices, and it's built around a decentralized system of user operators (nodes).

[Website](#)

[Twitter](#)

Type: infrastructure

Astro is a no-code platform for creating and managing DAOs on the NEAR blockchain. The platform provides DAOs tools for creating and voting on proposals, setting bounties, managing treasuries, sharing

community grants, and connecting DAOs and contributors. Astro is a part of the SputnikDAO mesh network.

[Website](#)

[Twitter](#)

Type: DAO builder

DeWork is a Web3 collaborative work management tool for contributors and DAOs. The tool allows DAOs to manage tasks and bounties in one place and pay contributors with their own token. On the other side contributors can send applications for jobs, sync with Discord, build profiles, and vote.

[Website](#)

[Twitter](#)

Type: workspace

Wonderverse is a platform with an intuitive task management system that allows DAOs and teams to organize projects, pay contributors, build and manage communities and collaborate.

[Website](#)

[Twitter](#)

Type: governance

Juicebox is a decentralized platform that allows projects to raise funds from the community. The platform offers fundraisers a set of features like; designing a fundraising page, set-up funding structure, defining funds distribution, and rewarding community members with tokens.

[Website](#)

Type: crowdfunding

Opolis is a digital employment cooperative for independent workers like DAO contributors, freelancers, and gig-workers that provide them access to medical insurance, retirement plans, tax compliance, and other various benefits from traditional business infrastructure.

Type: legal

Clarity is a coordination and info management tool for DAOs and presents a single collaborative workspace for contributors and enables them to easily plan projects, track tasks, and stay organized. Clarity also provides free-form documents for productive project management.

Type: governance

OpenOrgs is an analytic website for DAOs that publicly shows the state of their treasuries, basic governance information(website, governance forum, and most recent proposal), and structure of DAO treasury based on digital asset diversity.

Type: analytics

Zodiac is an application built on Gnosis Safe with a collection of DAO tools. Application has a modular and flexible architecture that allows module-based control of programmable accounts, un-opinionated standards for programmable account interaction, and reusable implementation of core and factory logic.

Website

Twitter

Type: security, governance

Request Network is a decentralized protocol for payment requests and its first successful app Request Finance is a platform to pay & be paid in crypto. The protocol also offers Request Create, an application for the creation and sharing of payment requests and the WordPress plugin WooReq for accepting cryptocurrency payments on WordPress websites.

Website

Twitter

Type: payment infrastructure

Certik is a blockchain security company that utilizes formal verification and AI technology to secure and monitor blockchains, smart contracts, and Web3 apps. Certik transparently provides a security leaderboard and analytic dashboard for audited projects. The company also provides a wide range of services for smart contract security; security insights for crypto wallets, visualization for activity between wallets, security audits, and penetration testing.

Website

[Twitter](#)

Type: security, analytics

Roll is a network for minting branded erc20 digital tokens that allow creators to own, control, and coordinate produced value across social media platforms and within the community. Roll equips creators with custodial wallets, token-economics setup, minting, and vesting functions in order to create their own decentralized micro-economy.

[Website](#)

[Twitter](#)

Type: governance, marketing

Sybil is a governance tool for discovering delegates, built by Uniswap DAO. The tool is used by several DAOs; Compound, Nouns, Radicle, Aave, PoolTogether, and ENS. The tool allows social profile connection (only Twitter).

[Website](#)

[Twitter](#)

Type: governance

Unslashed finance is a decentralized insurance protocol for all common risks for crypto assets: smart contract failures, wallet exploits, custody risks, oracle malfunctions, slashing validators, stable coin pegs and exchange hacks. Unslashed enables almost instant liquidity to insurance buyers and risk underwriters, ensures constant collateralization and guarantees transparency through an unbiased claims process.

[Website](#)

[Twitter](#)

Type: insurance

Sismo is a decentralized identity and privacy protocol that builds up users' Ethereum profiles with anonymized attestations created from his other accounts. Protocol issues ZK badges for reputation aggregation and privacy-preserving access control.

[Website](#)

[Twitter](#)

Type: identity, privacy

OpenZeppelin is an open-source platform for building secure decentralized applications. The platform provides users with a framework that consists of the required tools for creating and automating Web3 applications. OpenZeppelin also provides the most-used library of reusable smart contracts in space.

[Website](#)

Twitter

Type: workspace, security

IDX is a multi-platform identity protocol that replaces centralized user tables with a decentralized alternative. IDX allows users to build up a unified digital identity consisting of all their data while enabling developers to break down silos and freely share a users' data between applications.

[Website](#)

[Twitter](#)

Type: identity

Radicle is a decentralized code collaboration network built on open protocols. It provides Git-like peer-to-peer functionality without relying on third parties. Radicle offers various features for users like linking ENS name to profile, access to funding, link DAO to network or even DAO creation.

[Website](#)

[Twitter](#)

Type: governance, workspace

Myco is a platform for connecting community builders and allows them to own a share in the community that they were built. Platform incentivize contributors by rewarding them with shares of profit, helps turn community in functional business, filter, and archive valuable content and support community coordination

[Website](#)

[Twitter](#)

Type: governance, workspace, monetization

Bip.so is a public workspace platform with Git-enabled documents and deep integration with DAOs and community spaces. The platform provides solutions for built-in-public projects to better organize the workflow and coordinate between existing workspaces.

[Website](#)

[Twitter](#)

Type: governance, workspace

Sobol is a platform that provides dynamic mapping of accountability for DAO ecosystem, making it easier for DAO teams to move fast with alignment and trust. The platform focuses on people and shows the transparent structure of DAO teams and contributors with their roles, tasks, and responsibilities in the organization. Sobol also allows easier tracking of organizational progress and goals.

[Website](#)

[Twitter](#)

Type: governance

Disperse is a tool that helps DAOs distribute payments on multiple addresses with low gas fee costs like batch payments and airdrops. The tool is free to use for anyone.

[Website](#)

[Twitter](#)

Type: payment infrastructure

Smart invoice is a sophisticated invoice tool that handles payments between organizations (DAOs) and workers (contributors). Smart invoice uses smart contracts built on Ethereum to create a framework for creating and deploying invoices on the Gnosis chain.

[Website](#)

[Twitter](#)

Type: payment infrastructure

Upstream collectives is an easy-to-use platform for creating and managing DAOs with built-in tools for virtual meetings, contributing, crowdfunding, making proposals, and voting.

Website

Twitter

Type: DAO builder, governance

Fairmint is a platform that provides organizations to raise funds, create automated asset pools, and manage stakeholders. The platform provides the organization with a full-featured backend to run and manage ongoing fundraising events and create automated incentivization plans

Website

Twitter

Type: treasury management, funding

Commonwealth is a governance and community management protocol that enables users to claim and govern over their communities in a permissionless way. On protocol, anyone can create a community, link their governance methodology, and discuss the future of their specific community with tools like the crypto-native forum and off-chain governance. Commonwealth protocol is accessible on Ethereum, Cosmos, and Polkadot.

Website

Twitter

Type: governance

DAO Maker is a go-to platform for retail venture investing in equity and tokens. The platform provide low-risk participation frameworks in order to reach global retail in venture capital and incorporate pluggable solutions to the problems that early-stage ventures face after fundraising.

[Website](#)

[Twitter](#)

Type: funding, DAO incubator, marketing

Pessimistic - blockchain security company provides smart contract audits of Defi platform and blockchains, consulting services to blockchain startups, and education for a wide range of start-ups DAOs.

[Website](#)

[Twitter](#)

Type: security

Web3Auth is a simple, non-custodial auth infrastructure that enables Web3 wallets and applications to provide seamless user logins for both mainstreams and Web3. By aggregating OAuth (Google, Twitter, Discord) logins, different wallets, and existing key management solutions, Web3Auth provides dApps/wallets with a familiar experience that fits every user.

[Website](#)

[Twitter](#)

Type: security

EarniFi is a tool that aggregates all known airdrops and POAP tokens on one page. Users can visit Earnifi, input their wallet address and see

immediately if they are eligible for any airdrop rewards that they may have forgotten to claim. It's a very useful tool for DAOs marketing and promotion.

[Website](#)
